About

Computer Science student at TU/e focused on low-level systems. Experience in contributing to multidisciplinary student team and developing commercial projects. Interested in developing reliable and efficient technical systems.

Education

Technische Universiteit Eindhoven

since 09/2023

Bachelor of Computer Science and Engineering

- GPA: 8.2
- Elective courses in Integrated Circuit Design
- Third year student
- Recipient of TU/e High Potential Bachelor's Scholarship

Experience

Embedded Software Engineer (TU/e Aero Student Team)

since 09/2025

- Developing C++ fault detection and telemetry systems for a physical Battery Swap system using Arduino and Raspberry Pi
- System monitors current, voltage, temperature and positions for 7 Dynamixel motors
- Works within a multidisciplinary team

Calculus Teaching Assistant (Technische Universiteit Eindhoven)

2024, 2024

- Organized and conducted weekly sessions for two student groups
- Explained core mathematical concepts whilst guiding students in problem-solving structured sessions

Projects

Multi-agent Path Planning for Airport Luggage

- Built a graph model of an airport luggage system using C without external libraries
- Developed a multi-agent path finding algorithm that prevents collisions by running BFS in time-expanded search.
- Implemented reservation-based path allocation system that optimizes overall travel time for all agents
- Exported C code as a python library for simulation and validation purposes

Timetable Generator for Kindergartens

- Built a Python desktop app to gather and store kindergarten data and deployed it in a commercial kindergarten
- Used Google OR Tools to generate optimized timetables which reduced scheduling time from 1 day to few minutes
- Generator also deployed as HTTP API in Google Cloud for future use on the kindergarten website
- Actively used by a commercial kindergarten

Kindergarten Website

- Designed and developed a production website using React, TailwindCSS, and Firebase backend services
- Implemented responsive frontend, backend and a database
- Implemented CI/CD pipeline
- Deployed and actively used by a commercial kindergarten

Skills

Languages

C, C++, Java, Python, Javascript

Systems / Embedded

Linux, Arduino, Raspberry Pi

Tools

Git, Cadence
